STUDENT	# Ivan Burlaka
NANODEGREE	Front-End Web Developer
PROJECT	HTML Mockup

Hi Ivan,

This is a great start to your mockup! The only thing holding you back from meeting specifications is the formatting of your CSS file. Once it adheres to the Google HTML/CSS style guide, you will be good to go.

If you have any questions or concerns, please don't hesitate to contact us. We look forward to your next submission!

Design   Meets Specifications
- The DOM tree correctly represents the page content.
- Page elements use semantic tags where appropriate. Great use of header, section, article, and footer HTML5 tags!
- Design uses grid-based layout principles.

Responsiveness   Meets Specifications
- The page is responsively designed.
- Page renders correctly across a range of devices and browsers.

Separation of Concerns   Meets Specifications
- Page completely separates structure (HTML) from design/style (CSS).

Code Quality   Does Not Meet Specifications
- Code is not formatted to align with the Google HTML/CSS style guide (located here). In your CSS file, properties inside each CSS block should be alphabetized (font-size should precede font-weight) and there should be exactly one blank line between CSS rules.

Project Does Not Meet Specifications
